EDUCATION

Northwestern University (U.S. News #6)

Mar 2027

Computer Science & Radio, Television, and Film

- **Major GPA:** 3.91/4.0 ; TOEFL 112
- **Selected Courses:** Machine Learning, Deep Learning, Data Structures, Intro to AI, AI in Film Production, Game Design

INTERNSHIP EXPERIENCE

Microsoft - MAI

Oct 2025 – Present

One Person Entrepreneur

- **Product Strategy:** Conducted user interviews, competitive and market analysis to identify core learning pain points, shaping the product direction around context-aware dialog and immersive scenarios. Defined the product vision and authored PRDs covering interaction flows, learning paths, and GenUI generation logic.
- **Experience Design:** Designed core GenUI UX/UI patterns—including flashcards and AI-generated images, videos, articles, and gamified tasks—to support rapid “generate-once-use-once” learning cycles and reduce feedback latency.
- **Full-Stack MVP Delivery:** Built and deployed the full-stack MVP via Vibe Coding, and end-to-end LLM workflows including prompt-engineering pipelines. Integrated ASR, TTS, multi-modal generation (image/video/text), and agent-based orchestration to deliver natural, scenario-based learning experiences and a scalable prompt architecture.

ByteDance - AI Data Platform

Jul 2025 – Sep 2025

AI Platform Product Manager

- **CQC Knowledge Base Automation:** Led CQC platform AI upgrade across three scenarios—digital course generation, cross-tenant usage, and intelligent Q&A. Integrated AI digital human generation, reducing single video production by 5 hours, increasing course output by 367%, and saving 41.25 training days. Developed LabelGPT Agent to automate transcript generation and segmentation, resulting in a 65% increase in digital course output. Designed multi-dimensional table bots to enable BPO and cross-tenant digital-human functionalities; PRD and agent optimization improved Q&A efficiency by 60%.
- **Cross-Tenant Standardization:** Designed external-tenant access solutions resolving compliance constraints; enhanced core modules to expand tenant coverage to 70% .
- **Work Hour System Upgrade:** Led AIDP work hour system migration, automating production data tracking and management. Reduced manual input by 70% and alignment errors by 40%; implemented real-time dashboards to optimize human efficiency and ensure smooth transition to new platform.

Starward Game Studios - Cyber Imposter (AI Turn-Based MMO Game)

Sep 2024 – Feb 2025

AI Game Product Manager

- **System Optimization:** Collaborated with the algorithm team on Node.js & WebSocket backend to improve matchmaking stability and team balance; matching success rate increased 15%, mid-game exit rate decreased 12%.
- **AI Agent Development:** Built intelligent AI characters using Inworld Studio; optimized prompts for tone, emotion, and knowledge scope, achieved a 40% increase in dialogue rounds and improved scenario task completion to 68%.
- **User Growth:** Designed weekly & monthly engagement activities and activity analysis; DAU increased 18%, Discord/YouTube engagement grew 21%, next-day retention reached 35%, monthly active users exceeded 50k.

ByteDance - AI Lab (Dreamina.ai)

May 2024 – Sep 2024

AI Video Generation Product Manager

- **Training Data Pipeline:** Developed Python scripts to automate the collection of 600k hours of video across 20 cloud desktop.; filtered high-quality samples and built annotation SOP, generating 100k high-quality labeled data (98% accuracy), improving model output “good case” ratio by 20%.
- **Model Optimization:** Conducted user behavior analysis on 100k+ users, reorganized training data label structure, supplemented high-frequency scenarios, improving model video generation adoption by 23% and export rate by 18%.
- **Evaluation System Enhancement:** Created representative evaluation datasets from user behavior to align model assessment with real scenarios, refining evaluation metrics and improving model iteration efficiency.
- **Feature Improvement:** Redesigned camera control templates based on user preference and model capability, reducing user learning curve and increasing usage rate by 30%.

PROJECT EXPERIENCE

HackHarvard-HavenLink (AI Voice Interaction System)

Oct 2024

- Developed a voice-interactive IoT system providing underserved Boston communities with access to six essential services (shelter, healthcare, food assistance, etc.), building a React front-end and Flask backend integrated with ASR, Google Maps API, weather data, and OpenAI APIs for multi-turn natural language queries.

SKILLS

- **Programming & AI Tools:** Python, Java, C++, SQL, R, MATLAB, JavaScript, HTML/CSS, LLMs, RAG, AI Agent workflows; generative AI for video, content creation; NLP model evaluation, prompt engineering, and fine-tuning.
- **Software & Platforms:** Figma; Git; Postman; and AI product design workflows.
